

Program: "mvshmem2fits", Version 1.00, Mon Jun 16 13:23:02 2003

Purpose: Convert shared memory segments into FITS files  
on disk and optionally delete the former.

Usage: mvshmem2fits

-s <Space\_Separated\_SharedMemID\_List> (Require at least one)  
-f <Space\_Separated\_FITS\_filename\_List> (Require at least one)  
-d (Optional flag: default = no deletion of SharedMem segments)

For example:

```
mvshmem2fits -s shmem://h1 shmem://h2 -f /path/file1.fits  
/path/file2.fits -d
```

Up to a maximum of 128 shmem/FITS filename pairs can be specified.
